A BRIEF TOUR OF CONSCIOUSNESS - avalonlibrary.net

Read "A Brief Tour of Higher Consciousness A Cosmic Book on the Mechanics of Creation" by Itzhak Bentov available from Rakuten Kobo. A lighthearted yet profound guide to the realms of higher consciousness and the ultimate nature of reality.

Anyone interested in the inner reaches of the mind, the greater structure of the cosmos, and the spiritual evolution of humanity will find this book an informed and delightful read. Bentov explains the Kabbalistic principles of number and sound, the meaning of cosmic symbols, and ultimately, shows that the universe and thought are inseparable.

Looks at the structure and origins of the universe and discusses the role of the Kabalistic principles of number and sound

"How can people come to believe that their poodle is an impostor? Or see colors in numbers? Francis Crick, co-discoverer of DNA, said of V. S. Ramachandran's first book, "The patients he describes are fascinating, and his experiments on them are both simple and ingenious." With his unique energy and style Ramachandran now shares his insights into the mind from such everyday human experiences as pain, sight, and the appreciation of beauty to the ultimate philosophical conundrums of consciousness."--BOOK JACKET.

In his exciting and original view of the universe, Itzhak Bentov has provided a new perspective on human consciousness and its limitless possibilities. Widely known and loved for his delightful humor and imagination, Bentov explains the familiar world of phenomena with perceptions that are as lucid as they are thrilling. He gives us a provocative picture of ourselves in an expanded, conscious, holistic universe.

A pithy yet deep introduction to Einstein’s general theory of relativity Of the four fundamental forces of nature, gravity might be the least understood and yet the one with which we are most intimate. On Gravity combines depth with accessibility to take us on a compelling tour of Einstein’s general theory of relativity. A. Zee begins with the discovery of gravity waves, then explains how gravity can be understood in comparison to other classical field theories, presents the idea of curved spacetime, and explores black holes and Hawking radiation. Zee travels as far as the theory reaches, leaving us with tantalizing hints of the unknown, from the intransigence of quantum gravity to the mysteries of dark matter. Infused with Zee’s signature warmth and fresh style, On Gravity opens a unique pathway to comprehending relativity, gravity, spacetime, and the workings of the universe.

"Endlessly absorbing and informative. It would be hard to imagine a better introduction to this most important and fascinating field."—Bill Bryson, author of A Short History of Nearly Everything Paleontology: A Brief History of Life is the fifth title published in the Templeton Science and Religion Series, in which scientists from a wide range of fields distill their experience and knowledge into brief tours of their respective specialties. In this volume, Ian Tattersall, a highly esteemed figure in the fields of anthropology, archaeology, and paleontology, leads a fascinating tour of the history of life and the evolution of human beings. Starting at the very beginning, Tattersall examines patterns of change in the biosphere over time, and the correlations of biological events with physical changes in the Earth’s environment. He introduces the complex of evolutionary processes, situates human beings in the luxuriant diversity of Life (demonstrating that however remarkable we may legitimately find ourselves to be, we are the product of the same basic forces and processes that have driven the evolutionary histories of all other creatures), and he places the origin of our extraordinary spiritual sensibilities in the context of the exaptational and emergent acquisition of symbolic cognition and thought. Concise and yet comprehensive, historically penetrating and yet up-to-date, responsibly factual and yet engaging, Paleontology serves as the perfect entrée to science’s greatest story.

“Rutherford describes [The Book of Humans] as being about the paradox of how our evolutionary journey turned ‘an otherwise average ape’ into one capable of creating complex tools, art, music, science, and engineering. It’s an intriguing question, one his book sets against descriptions of the infinitely amusing strategies and antics of a dizzying array of animals.”—The New York Times Book Review Publisher's Note: The Book of Humans was previously published in hardcover as Humanimal. In this new evolutionary history, geneticist Adam Rutherford explores the profound paradox of the human animal. Looking for answers across the animal kingdom, he finds that many things once considered exclusively human are not: We aren't the only species that "speaks," makes tools, or has sex outside of procreation. Seeing as our genome is 98 percent identical to a chimpanzee's, our DNA doesn't set us far apart, either. How, then, did we develop the most complex culture ever observed? The Book of Humans proves that we are animals indeed—and reveals how we truly are extraordinary.

ATTENTION TRAINERS: It's Not About YOU - It's About the LEARNER! What is the biggest mistake a trainer can make? Quite simply, it is focusing all of their efforts on themselves and not their students! Many inexperienced trainers fall into this trap, but it doesn't have to happen to you! This book provides easy-to-execute examples that, when utilized, will make any rookie trainer look like a seasoned pro in just one day! You will learn how to structure the classroom experience in such a positive way that I guarantee it will make a difference in your professional life and in the lives of your participants. The techniques outlined in this book will help you to become the Great Trainer you have always wanted to be - because although good trainers may know these methods, Great Trainers make it happen! Inside, you will discover how to: -Create an inviting physical and emotional learning environment for your students. An inviting learning environment leads to higher levels of participation, retention, and on-the-job application! -Be less of an instructor and more of a "Tour Guide." Utilizing tour guide techniques will make your class anything-but-ordinary, causing people to look forward to your next event! -Utilize Great Trainer techniques whether you're facilitating a 5-day course, a 60-minute training session, or a 15-minute presentation! -Apply the techniques that will help you go WACCO for your participants - without spending a dime! Get on the road to continuous training improvement and start reading!

For many of us, machine learning and artificial intelligence (AI) are abstract terms that have become popularized for their roles in automation and robotics. In healthcare, uses of AI emerged several decades ago and have significantly expanded to the present day. Data Pulse presents a current snapshot of uses of AI in healthcare, including essential opportunities and challenges. The discussion explores its impact at many levels of the healthcare system, from researchers and entrepreneurs to physicians and patients. With easily understood language, Marcetich defines common terms of AI and shows us how various AI tools are influencing research, clinical, and administrative areas of healthcare. The reader will learn how current discoveries build on the decades of previous work in biology, robotics, and computer science, along with the unforeseen ethical and legal challenges they have provoked. Data Pulse is a story of important partnerships and strategies that are reshaping modern healthcare through AI. It will inform our view of the past, present, and rapidly evolving future of AI in healthcare.

This new edition of Friedman's landmark book explains the flattening of the world better than ever- and takes a new measure of the effects of this change on each of us.
