It is the flow of electrons or electric charge. It is measured in Amperes or simply Amps, and denoted by the letter 'I' or lower case i. This electric current can be direct or alternating.

The Direct Current (DC) flows in a unidirectional way and generally it is produced by batteries, solar cells, thermocouples, etc.

There are two types of current, direct current (DC) and alternating current (AC). DC is current that flows in one direction with a constant voltage polarity while AC is current that changes direction periodically along with its voltage polarity. Thomas Edison and Alessandro Volta were pioneers in DC current and wrote much of electricity's history.
