When starting the engine, the force of overfueling spring (14) is enough to push thrust collar (15) to the full fuel position. This lets the engine have the maximum amount of fuel for injection when starting. At approximately 400 rpm, carrier and governor weights (17) create enough force to push overfueling spring (14) together. Thrust collar (15) and spring seat (13) come into contact. From ...
