17.1 The Westward Spirit. While a few bold settlers had moved westward before the middle of the nineteenth century, they were the exception, not the rule. The "great American desert," as it was called, was considered a vast and empty place, unfit for civilized people. In the 1840s, however, this idea started to change, as potential settlers began to learn more from promoters and land developers of the economic opportunities that awaited them in the West, and Americans extolled the belief ...

John Chapter 17 One of the most famous prayers between Jesus and His Father, God, is recorded in John Chapter 17. While the wording differs slightly than accounts written in other gospels, the overall theme is consistent: Jesus' heart is heavy with the ordeal that He is about to endure, as well as the trials and tribulations that will befall His followers afterward.

In Numbers chapter 17, God instructed Moses to put back Aaron's staff to remind all the children of Israel who would be rebellious on the priesthood lineage. It would be a reminder that any person who grumbles for the position is not only rebellious to Moses and Aaron, but also to Jehovah God who had delivered them from hard bondage, gave them quail and manna while in the wilderness, and water to drink.

A fundamentally new approach to the history of science and technology This book presents a new way of thinking about the history of science and technology, one that offers a grand narrative of human history in which knowledge serves as a critical factor of cultural evolution. Jürgen Renn examines the role of knowledge in global transformations going back to the dawn of civilization while providing vital perspectives on the complex challenges confronting us today in the Anthropocene—this new geological epoch shaped by humankind. Renn reframes the history of science and technology within a much broader history of knowledge, analyzing key episodes such as the evolution of writing, the emergence of science in the ancient world, the Scientific Revolution of early modernity, the globalization of knowledge, industrialization, and the profound transformations wrought by modern science. He investigates the evolution of knowledge using an array of disciplines and methods, from cognitive science and experimental psychology to earth science and evolutionary biology. The result is an entirely new framework for understanding structural changes in systems of knowledge—and a bold new approach to the history and philosophy of science. Written by one of today's preeminent historians of science, *The Evolution of Knowledge* features discussions of historiographical themes, a glossary of key terms, and practical insights on global issues ranging from climate change to digital capitalism. This incisive book also serves as an invaluable introduction to the history of knowledge.

This volume, the fourth of five planned in Joseph Frank's widely acclaimed biography of Dostoevsky, covers the six most remarkably productive years in the novelist's entire career. It was in this short span of time that Dostoevsky produced three of his greatest novels--*Crime and Punishment*, *The Idiot*, and *The Devils*--and two of his best novellas, *The Gambler* and *The Eternal Husband*. All these masterpieces were written in the midst of harrowing practical and economic circumstances, as Dostoevsky moved from place to place, frequently giving way to his passion for roulette. Having remarried and fled from Russia to escape importuning creditors and grasping dependents, he could not return for fear of being thrown into debtor's prison. He and his young bride, who twice made him a father, lived obscurely and penuriously in Switzerland, Germany, and Italy, as he toiled away at his writing, their only source of income. All the while, he worried that his recurrent epileptic attacks were impairing his literary capacities. His enforced exile intensified not only his love for his native land but also his abhorrence of the doctrines of Russian Nihilism--which he saw as an alien European importation infecting the Russian psyche. Two novels of this period were thus an attempt to conjure this looming spectre of moral-social disintegration, while *The Idiot* offered an image of Dostoevsky's conception of the Russian Christian ideal that he hoped would take its place.

This chapter focuses on evolutionary computation, in particular genetic programming, as examples of drawing inspiration from biological systems. We set the choice of evolution as a source for inspiration in context and discuss the history of evolutionary computation and its variants before looking more closely at genetic programming. After a discussion of methods and the state of the art, we review application areas of genetic programming and its strength in providing human-competitive solutions.
