eThis book provides a comprehensive introduction to patent policy, law and practice in Greater China and will be a go-to book for patent practitioners who have client interests in that region. Features: *eIntroduction to Chinese paten

How do patents affect innovation in Mainland China and Hong Kong? How can two patent systems operate within one country and how is innovation affected by the 'one country two systems' model? For the first time, this book links these challenging issues together and provides a comprehensive overview for government officials, law-makers, academics, law practitioners and students to understand the patent systems of Mainland China and Hong Kong. Themes examined include the interaction between the two distinctive patent regimes, the impact of patents on innovation in China's specific industries such as green tech, traditional Chinese medicines and telecommunications, the role of utility models in inflating low-quality patents and the application of good faith principle in enforcing FRAND in Mainland China, patent system reforms in Hong Kong, and the impact of these changes on innovation in the two vastly distinctive yet closely connected jurisdictions.

This is one in a series of country reports on the intellectual property systems of Asia. The authors and editors note the difficulty of obtaining authentic source material, but nevertheless provide as comprehensive a view of China's intellectual property protection as possible.

This is one in a series of country reports on the intellectual property systems of Asia. The authors and editors note the difficulty of obtaining authentic source material, but nevertheless provide as comprehensive a view of China's intellectual property protection as possible.

The first book on how patents and innovation interact within the two co-existing patent systems in Mainland China and Hong Kong.

This dissertation, "The Compatibility of Patent Law and Traditional Chinese Medicine" by Yifu, Chen, ???, was obtained from The University of Hong Kong (Pokfulam, Hong Kong) and is being sold pursuant to Creative Commons: Attribution 3.0 Hong Kong License. All rights not granted by the above license are retained by the author. Abstract: ?Traditional Chinese Medicine (TCM) is a medical system with a unique medical philosophy that continues to guide the contemporary turning out of new pharmaceutical formulae. The clinically-proved effective components of these formulae are being extracted by means of modern technology. Natural Chinese medicines account for approximately 30% of the global sales volume of all medicines, and the international market-size of the TCM industry is increasing rapidly. The TCM industry depends on the patent protection of the results of its R&D no less than does any other industry. However, the patent examination guidelines of many important jurisdictions are hostile to the granting of patents to TCM products and processes. This is partly attributable to the vast differences between the philosophies of TCM and Western medicine, and to the imperfect understanding in many jurisdictions (particularly where Western Medicine is dominant) of the former. To this considerable degree, patent law fails to accommodate the TCM industry. Consequently, the TCM inventor will be left open to the depredations of the 'free-rider' phenomenon, the circumstance in which the inventor loses the benefits of his invention, and his investment in it, to a purloiner. The research examines the compatibilities between patent law and TCM, and argues that patent policy shall be adjusted to better accommodate the characteristics of TCM. Other forms of IPR protection are also discussed in comparison with patent with the purpose of illustrating the significance of patent in protecting TCM inventions.
