Reprint of the Data Protection Act, 1998.

Under sections 55A and 55B of the Data Protection Act 1998 introduced by the Criminal Justice and Immigration Act 2008, the Information Commissioner may, in certain circumstances, serve a monetary penalty notice on a data controller. The monetary penalty is not kept by the Commissioner, but must be paid into the Consolidated Fund owned by HM Treasury. The Commissioner's underlying objective in imposing a monetary penalty notice is to promote compliance with the Act. It is clear from the wording of the sections 55A & 55B of the Act that a monetary penalty notice will only be appropriate in the most serious situations. Therefore in such cases the monetary penalty must be sufficiently meaningful to act both as a sanction and a deterrent. This doesn't change the Commissioner's commitment to provide guidance simplifying the Act where possible and making it easier for organisations to comply with their obligations under the Act. This is the statutory guidance issued under the Act and as such has been approved the Secretary of State and laid before Parliament

The first guide to planning and performing a physical penetration test on your computer's security Most IT security teams concentrate on keeping networks and systems safe from attacks from the outside-but what if your attacker was on the inside? While nearly all IT teams perform a variety of network and application penetration testing procedures, an audit and test of the physical location has not been as prevalent. IT teams are now increasingly requesting physical penetration tests, but there is little available in terms of training. The goal of the test is to demonstrate any deficiencies in operating procedures concerning physical security. Featuring a Foreword written by world-renowned hacker Kevin D. Mitnick and lead author of The Art of Intrusion and The Art of Deception, this book is the first guide to planning and performing a physical penetration test. Inside, IT security expert Wil Allsopp guides you through the entire process from gathering intelligence, getting inside, dealing with threats, staying hidden (often in plain sight), and getting access to networks and data. Teaches IT security teams how to break into their own facility in order to defend against such attacks, which is often overlooked by IT security teams but is of critical importance Deals with intelligence gathering, such as getting access building blueprints and satellite imagery, hacking security cameras, planting bugs, and eavesdropping on security channels Includes safeguards for consultants paid to probe facilities unbeknown to staff Covers preparing the report and presenting it to management In order to defend data, you need to think like a thief-let Unauthorised Access show you how to get inside.

The rapid development of information technology has exacerbated the need for robust personal data protection, the right to which is safeguarded by both European Union (EU) and Council of Europe (CoE) instruments. Safeguarding this important right entails new and significant challenges as technological advances expand the frontiers of areas such as surveillance, communication interception and data storage. This handbook is designed to familiarise legal practitioners not specialised in data protection with this emerging area of the law. It provides an overview of the EU's and the CoE's applicable legal frameworks. It also explains key case law, summarising major rulings of both the Court of Justice of the European Union and the European Court of Human Rights. In addition, it presents hypothetical scenarios that serve as practical illustrations of the diverse issues encountered in this ever-evolving field.
