Chloroplasts are dynamic organelles within the plant cell. Movement of entire chloroplasts to maximize light absorption was observed long ago by light microscopy (see

Access Free Plant

textbook, Figure 9.14). Chloroplasts are surrounded by an envelope membrane, which sometimes appears to circulate around the main body of the organelle.

Vapor Gradients. And
Transpiration from the
Development
Sixth Edition
leaf depends on two
major factors: the
difference in water vapor
concentration between
the leaf air spaces and the
the external air and, the
diffusional resistance (r)
of this pathway. This
concept of transpiration
is analogous to the flow
of electrons in an electric
circuit.

The upper mature leaves on a plant usually provide photosynthates to the growing shoot tip and young, immature leaves; the lower leaves supply predominantly the root system.

Intermediate leaves export in both directions, bypassing the intervening

Access Free Plant

mature leaves. The importance of various sinks may shift during plant development.
