Don't worry, everyone has been there at some point--and while testing and test-driven development are important aspects of Rails development, many tutorials gloss over these components. In Everyday Rails Testing with RSpec, I'll show you how I got past that hurdle, increasing my code's trustworthiness and saving untold time in browser-based testing.

To start, add rspec-retry to the test group in your Gemfile, then bundle install to add it. Then, configure RSpec to use it—I prefer to do this in a separate file like spec/support/rspec_retry.rb, but you can also include it in your main spec/rails_helper.rb file, as shown in rspec-retry's README. Whatever works for you.

```
group :development, :test do gem 'rspec-rails', '~> 3.6.0' # leave other gems provided by Rails end
```

If you're reworking with your own, existing application, this might look a little different for you. You'll want to include the rspec-rails dependency in such a way that it loads in both the Rails development and test
