<p>As Scottish Correspondent for Earthmovers Magazine, David Wylie has enjoyed privileged access to the mines, quarries, road projects and forestry sites across Scotland. On his visits he has seen some of the biggest and arguably the best, earthmoving machinery in the world, in action. Earthmovers in Scotland brings together 32 of David’s reports from these visits to tell the story of the highly skilled, experienced owners, drivers and managers that work with earthmoving equipment and explains why they select, maintain and operate these machines. The book features some of the largest earthmovers in the UK, such as Caterpillar’s D11R bulldozer, Liebherr’s massive 320 tonne R9350s and the mighty 520 tonne Q&K RH200 at Banks Mining Shotton surface mine in Northumberland, a short hop over the Scottish border. It also takes a look at a 1.5 tonne mini digger, special trailers that can lift and transport 1800 tonne bridges into position, and covers Demag’s H485 record breaking mining shovel amongst others.Taking pride of place in the book are over 400 stunning photographs, many of which have not been seen before and many of which feature machines that were the first of their kind.Each high quality photo has been carefully composed to capture each machine in all its power and brilliance with the spectacular Scottish scenery as a backdrop and 80 of the most important and detailed images are presented as double pages to help you get close to the action. This beautiful book sets out to provide its owner with a comprehensive look at Scottish earthmovers scene, and will be of interest to enthusiasts, owners, drivers and site managers worldwide.</p>

His film career has left him wealthy but incomplete. When a director approaches him with a script that has a riddle for a plot Frank is intrigued by its resonance. In his search for an answer to the riddle, Frank embarks on a journey that will lead him into a past he doesn’t remember. Jim Lewis, acclaimed author of Why the Tree Loves the Ax, returns with a novel stunning in its originality and scope. Various combinations of commercially available technologies could greatly reduce fuel consumption in passenger cars, sport-utility vehicles, minivans, and other light-duty vehicles without compromising vehicle performance or safety. Assessment of Technologies for Improving Light Duty Vehicle Fuel Economy estimates the potential fuel savings and costs to consumers of available technology combinations for three types of engines: spark-ignition gasoline, compression-ignition diesel, and hybrid. According to its estimates, adopting the full combination of improved technologies in medium and large cars and pickup trucks with spark-ignition engines could reduce fuel consumption by 29 percent at an additional cost of \$2,200 to the consumer. Replacing spark-ignition engines with diesel engines and components would yield fuel savings of about 37 percent at an added cost of approximately \$5,900 per vehicle, and replacing spark-ignition engines with hybrid engines and components would reduce fuel consumption by 43 percent at an increase of \$6,000 per vehicle. The book focuses on fuel consumption--the amount of fuel consumed in a given driving distance--because energy savings are directly related to the amount of fuel used. In contrast, fuel economy measures how far a vehicle will travel with a gallon of fuel. Because fuel consumption data indicate money saved on fuel purchases and reductions in carbon dioxide emissions, the book finds that vehicle stickers should provide consumers with fuel consumption data in addition to fuel economy information.

Mitsubishi's 4G63t engine is among the most powerful engines ever in the sport-compact world. It's not uncommon to find one of these four-cylinder, iron-block, aluminum-headed, 2-liter turbocharged monsters making more than 1,000 horsepower with the right modifications and tuning - well above the 200-300 hp produced in the factory-made engines. Bolted into such cars as the Mitsubishi Lancer Evolution, Eclipse, and Galant, and the Eagle Talon and Plymouth Laser, the 4G63t has more than a cult following among sport-compact enthusiasts, who know and respect this engine's immense performance potential at the track or on the street. Up until now, in-depth performance information on the 4G63t has been hard to find. For this book, author Robert Bowen went straight to the source, Robert Garcia of Road/Race Engineering in Santa Fe Springs, California. RRE is the most well-known and respected Mitsubishi turbo performance shop in the United States, and Garcia is its in-house engine builder. Mitsubishi enthusiasts will benefit from Garcia's expertise and be able to build better, stronger engines than ever before. "How to Build Max-Performance Mitsubishi 4G63t Engines" covers every system and component of the engine, including the turbocharger system and engine management. More than just a collection of tips and tricks, this book includes a complete history of the engine and its evolution, an identification guide, and advice for choosing engine components and other parts. Profiles of successful built-up engines show the reader examples of what works, and the book includes helpful guidance for choosing your own engine building path.
