The Myth of Austrian victimization at the hands of both Nazi Germany and the Allies became the unifying theme of Austrian official memory and a key component of national identity as a new Austria emerged from the ruins. In the 1980s, Austria's myth of victimization came under intense scrutiny in the wake of the Waldheim scandal that marked the beginning of its erosion. The fiftieth anniversary of the Anschluss in 1988 accelerated this process and resulted in a collective shift away from the victim myth. Important themes examined include the rebirth of Austria, the Anschluss, the war and the Holocaust, the Austrian resistance, and the Allied occupation. The fragmentation of Austrian official memory since the late 1980s coincided with the dismantling of the Conservative and Social Democratic coalition, which had defined Austrian politics in the postwar period. Through the eyes of the Austrian school system, this book examines how postwar Austria came to terms with the Second World War.

Arguing that Poe is exemplary in his ambivalent relationship to mass culture, the author offers a new theorization of mass culture and ideology.

Water Management Challenges in Global Change contains the proceedings of the 9th Computing and Control for the Water Industry (CCWI2007) and the Sustainable Urban Water Management (SUWM2007) conferences. The rationale behind these conferences is to improve the management of urban water systems through the development of computerbased methods. Issues such as economic globalisation, climate changes and water shortages call for a new approach to water systems management, which addresses the relevant technical, social and economic aspects. This collection represents the views of academic and industrial experts from a number of countries, who provide technical solutions to current water management problems and present a vision for addressing the global questions. The themes underlying many of the contributions include energy and material savings, water savings and the integration of different aspects of water management. The papers are grouped into three themes covering water distribution systems, sustainable urban water management and modelling of wastewater treatment plants. The water distribution topics cover asset and information management, planning, monitoring and control, hydraulic modelling of steady state and transients, water quality and treatment, demand and leakage management, optimisation, design and decision support systems, as well as reliability and security of water distribution systems. The sustainable urban water management topics include urban drainage systems, water reuse, social aspects of water management and also selected facets of water resources and irrigation. Computer control of wastewater treatment plants has been seen as less advanced than that of clean water systems. To address this imbalance, this book presents a number of modelling techniques developed specifically for these plants. Water Management Challenges in Global Change will prove to be invaluable to water and environmental engineering researchers and academics; managers, engineers and planners; and postgraduate students.

In this Renegade Angels novella from the #1 New York Times bestselling author of the Crossfire series, a powerful angel breaks all the rules by falling for the mortal whose life she's saved... Chained in the dark, Trevor Descansos endures pain and terror as vampires slowly drain the life from him. He finds mercy in Sentinel Siobhán, a beautiful avenging angel with lethal wings. Ageless and eternal, Siobhán has seen too much to be surprised by anything, but the mortal she finds in the pit of a vampire den shakes her to the core. Broken and near death, his ravaged masculine beauty stirs the heart she hadn't realized she possessed. Though she's tasked with eradicating the vampire disease sweeping across her world, she nurses Trevor back to health, healing him even as he awakens a forbidden longing.
