See Preventable Exposures Associated With Human Cancers (Cogliano et al., 2011) Although care was taken in preparing these lists, mistakes may be present. If you find an error, please notify us at imo@iarc.fr. Last update: 27 October 2020

Agents Classified by the IARC Monographs, Volumes 1–127 ...
Three carcinogens were responsible for over 90% of the environmental burden of cancer: solar ultraviolet (UV) radiation, radon in homes, and fine particulate matter (PM 2.5) in outdoor air. Eight other carcinogens had an estimated mean burden of at least 10 annual cancer cases: acrylamide, arsenic, asbestos, chromium, diesel engine exhaust particulate matter, dioxins, formaldehyde, and second ...

An approach to estimating the environmental burden of ...
There are many natural carcinogens. Aflatoxin B 1, which is produced by the fungus Aspergillus flavus growing on stored grains, nuts and peanut butter, is an example of a potent, naturally occurring microbial carcinogen. Certain viruses such as hepatitis B and human papilloma virus have been found to cause cancer in humans.
