Bringing together a wide range of studies from twelve European countries, this book offers a state-of-the-art overview of the driving forces behind spatial diversity and social complexity inherent in second home expansion in all parts of the continent - from Scandinavia to the Mediterranean and from the British Isles to Russia - in the context of contemporary mobility patterns largely induced by tourism. As befits the overall conception of the book as a compendium of current second home research, planning and policy issues, the book endorses the following: multidisciplinary approaches to the second home phenomenon as an expression of the ' leisure class ' mobility and recreation-based lifestyles, as well as a constitutive element of post-productivist land-use patterns and landscape change; and socio-economic and territorial development planning and policy-related perspectives on social change and spatial re-organization provoked by the expansion of second home tourism in times of prosperity and crisis.

' This book shows that second home tourism has become such an important sector of the economy that it is no longer possible to let it develop freely: it is the source of new forms of social deprivation; it generates residential economies that are particularly sensitive to the economic cycle; it often impairs beautiful landscapes and increases human pressure on natural environments. As a result, it is one of the major physical planning stakes of touristic areas ' (From the concluding essay by Paul Claval, Universit é de Paris I - Sorbonne, Paris, France).

New standards of corporate behaviour have been established in developed countries, obliging them to record information about the 'triple bottom line' in their annual reports. Corporations, especially multinational companies, have had to develop new strategic orientations. Research on social, environmental and overall ethical behaviour of companies has been developed. The concept of stakeholder has simultaneously gained a kind of 'metaphoric evidence'. The book comments on the American theoretical foundations of the notion of Corporate Social Responsibility, and more specifically, the concept of the stakeholder, and it defines a European perspective.

Extreme Wildfire Events and Disasters: Root Causes and New Management Strategies highlights the urgent need for new methods to prepare and mitigate the effects of these events. Using a multidisciplinary, socio-ecological approach, the book discusses the roots of the problem, presenting a new, innovative approach to wildfire mitigation based on the operational concept of Fire Smart Territory (FST). Under the guidance of its expert editors, the book highlights new ways to prevent and respond to extreme wildfire events and disasters through sustainable development, thus revealing better management methods and increasing protection of both the natural environment and the vulnerable communities within it. Reveals the complexity of extreme wildfire events and disasters in an accessible, comprehensive and multidisciplinary way Reviews the ground-breaking concept of Fire Smart Territory (FST) which offers an opportunity to reduce wildfire occurrence and severity through measures that promote sustainable development Proposes a new perspective on disaster risk reduction to help researchers, planners and professionals successfully adapt their methods for mitigating current and future issues

Since the 1970s and particularly the works of T ü xen (1978) and G é hu & Rivas-Mart í nez (1981), dynamico-catenal phytosociology has facilitated the integration of vegetation dynamics by more precisely describing the trajectories of vegetation series. A national habitat mapping program (CarHAB), launched by France ' s Ministry of Ecology, aims to map the vegetation and vegetation series of metropolitan France at a scale of 1: 25,000 by 2025. In this context, Corsica has been selected as a pilot region, due to its unique characteristics regarding Mediterranean and alticole vegetation. This book describes in detail the vegetation series and geoseriess (ecology, structure, dynamic trajectories, effects of anthropogenic factors on vegetation dynamics, catenal positioning in the landscape) of two Corsican sectors: Cap Corse and Biguglia pond. These two study sites were selected using two methods:
• For Cap Corse, the typology and mapping are based on an inductive approach, which seeks to understand the dynamics of vegetation by drawing on the mature, substitutional, pioneering and anthropogenic associations likely to exist within a tessellar envelope. These various dynamic stages characterize " the vegetation series " (sigmetum or synassociation), the fundamental unit of symphytosociology (G é hu 2006; Biondi 2011). The aim of symphytosociology is, therefore, to define the vegetation series; in other words, it seeks to identify the repetitive combinations of syntaxa under homogeneous ecological conditions.
• For Biguglia pond, the typology and mapping are based on a deductive approach, which combines (under SIG) the ecological descriptor maps with the vegetation mapping, in order to reveal the tesselas and the natural potential vegetation that underlies them. Thanks to the improvement of GIS techniques, this approach has been frequently used to characterize plant landscapes from vegetation to vegetation geoseriess since the 2000s, with applications to the conservation management of natural and semi-natural environments.

The document, fifth edition of a collection which started in 1997, presents a survey of marine-related activities in France. The commercial sector includes exploitation and extraction of marine resources, the manufacturing industry and private services. In this new edition, a special effort is devoted to the analysis of maritime port-related industries. The non-commercial sector includes public services, including the French Navy, state services, education, safety, marine and coastal environment protection, marine sciences. Each activity of the commercial sector is described by key figures (turnover, value added and employment). The non-commercial sector includes data on running costs, in particular, personnel costs. In addition to indicators, qualitative information is provided on the recent developments and future prospects of industries.

Around the world, when people think of vacation it's the beach they want-even when long distances must be traversed, the seashore is the place to escape the rigors of modern life. How did this come to be, and what does our ongoing love affair with the beach mean? How do shore vacations differ from traditional tourism, and what does this tell us about our dreams and fears? In At the Beach, Jean-Didier Urbain offers witty and insightful answers to these questions.

The effects of tourism on the ecology and natural environment of tourist destinations are hotly debated and research has expanded in the field of ecotourism and sustainability. This book considers the positive contributions that tourism can make to the conservation of global biodiversity by reviewing and analysing the economic and political contributions of tourism to conservation through establishment of private game and wildlife reserves, lodges and tourist facilities. Featuring 100 international case studies from private marine reserves to bird watching lodges, this book covers key topics including sources of capital and operational funding, corporate and organisational structure, marketing strategies, primary conservation outcomes and spin-off effects, links to public protected areas, future plans and global trends.

Les actes de ces journ é es font é tat de r é flexions, tant en France qu' à l ' é tranger, sur la restauration de marais, d'estuaires, de baies et de lagunes, incluant l'incidence sur les esp é ces et ressources. L'ouvrage regroupe une s é lection des communications pr é sent é es devant un public de scientifiques, enseignants, am é nageurs professionnels de la mer et conservateurs du littoral. Y sont pr é sent é s quelques grands chantiers (lagunes de Venise et de Tunis, baie du Mont-Saint-Michel, estuaire de Seine...), ainsi que des r é alisations de tailles et de natures diverses. Des aspects particuliers de la biorestauration sont abord é s au travers du traitement biologique des vases, ou celui des pollutions par hydrocarbures. Les aspects technico- é conomiques s'appuient sur des exemples accidentels ou naturels. Les am é nageurs et les soci é t é s d'ing é nierie é cologique pourront trouver, dans ces documents, crit é res et m é thodes d' é valuation scientifique pour quantifier les co û ts de restauration d' é cosyss é mes en fonction de l'importance des " d é g â ts ".

The term "risk" is very often associated with negative meanings. However, in most cases, many opportunities can present themselves to deal with the events and to develop new solutions which can convert a possible danger to an unforeseen, positive event. This book is a structured collection of papers dealing with the subject and stressing the importance of a relevant issue such as risk management. The aim is to present the problem in various fields of application of risk management theories, highlighting the approaches which can be found in literature.
