Web Service Roles. There are three major roles within the web service architecture □ Service Provider. This is the provider of the web service. The service provider implements the service and makes it available on the Internet. Service Requestor. This is any consumer of the web service. The requestor utilizes an existing web service by opening a network connection and sending an XML request. Service Registry

Web Services - Architecture - Tutorialspoint

Web Services Architecture In ASP.NET, a web service is essentially a listener that monitors a particular URL exposed via HTTP, looking for requests packaged as SOAP messages. When a request arrives, the ASP.NET runtime unpackages the request and calls the method for which the request is intended, passing in any parameters included with the request.

Web Services Architecture - ASP.NET in a Nutshell [Book]

A Web Service is a web application that follows code-behind architecture such as the ASP.NET web pages but it does not have a user interface. A Web Service application is basically a class containing a method that is exposed over the Web using simple messaging protocol stacks. The methods of a Web Service are called web methods.

An Overview Of Web Services In .NET

So a Web Service endpoint running on Microsoft.NET could be invoked by another application running on, for example, J2EE, and vice versa. Microsoft.NET and Web Services. Although Web Services can be created on any platform, Microsoft's .NET framework is heavily geared towards the creation of Web Services.
