From the author of *The Homeowner's Guide to Renewable Energy*, an easy guide to solar electricity—everything you need to power your home or small business. Written for the individual or business layman, this is the fully revised and updated guide for generating solar electricity. Practical and accessible, it provides a basic understanding of electricity, wiring, and solar energy. The book guides the reader through assessing your solar electricity site and determining the type of solar system needed for to generate solar electricity, providing you with a solid understanding of grid-tied and off-grid systems, along with important guidelines on installation. *Power from the Sun, 2nd Edition*, discusses types of photovoltaic and photovoltaic solar energy systems, and includes comprehensive information on recent changes and improvements in PV modules, charge controllers, inverters, batteries, generators, and net metering policies. It offers an excellent overview of the many options available as a guide for generating solar electricity, allowing you to make the best choices for your individual situation during the design, installation, and operation of a solar energy system. This is the definitive layman's guide for homeowners, business owners, installers, architects, and just about anyone interested in generating solar electricity to lower energy bills and achieve greater independence through solar energy. “ Dan Chiras is as reliable as a Swiss watch—once again he's created a text that's as accessible as it is informative. ” —Ann Edminster, author of *Energy Free: Homes for a Small Planet*

own transition away from fossil fuel dependence. ” —Bruce King, PE Director, Ecological Building Network, and author of *The New Carbon Architecture*

Easy-to-understand, accurate, and comprehensive, this is the guide for anyone interested in installing a solar electric system. *Power from the Sun* provides a basic understanding of electricity, solar energy and the sun, and solar site assessment. It discusses the types of photovoltaics (PVs) and PV systems, advances in PVs, charge controllers, inverters, batteries, and generators, as well as the installation and maintenance of a PV system. This book is written for the layperson and is designed to raise the solar electricity literacy of readers. It provides a great overview of the many options available and is designed to help homeowners make wise decisions during the design, purchase, and installation of solar electric systems—and save a lot of money. Providing readers with the knowledge necessary to communicate effectively with PV installers, *Power From the Sun* is a great guide for homeowners, business owners, installers, architects, building department officials, utility company employees, and just about anyone else who wants to lower their energy bills or achieve greater energy independence. Dan Chiras is president of Sustainable Systems Design, Inc., a residential renewable energy and green building consulting firm, and is director of The Evergreen Institute ’ s Center for Renewable Energy and Green Building, which offers workshops on residential renewable energy and green building. He is an internationally acclaimed speaker and author and has published twenty-five books, including *The Homeowner ’ s Guide to Renewable Energy and Power from the Wind*.

From animals and plants to weather and renewable energy, this compelling series takes a closer look at the significant role the sun plays in human, animal, and plant life, helping young readers understand the sun's importance to our planet. This set presents the sun's relationship to animals, Earth's surface, our weather, plant life, and its relationship to renewable energy. Each book encourages readers to discover how Earth's orbit around the sun leads to life in many forms. With full-color photographs, fun fact boxes, activities, and further information sections, this set encourages young readers to learn more about the universe and life on Earth. Features include: Age-appropriate sidebars introduce cross-curriculum concepts. Activities that explore key topics related to Earth and the sun. Chapter activities emphasize observable and predictable patterns such as night and day and seasons.

Alternative Energy Sources: Ultimate How-To Guide on Building Your Own Affordable Power System Book#1: Power Generation: Build a Small or a Mid Size Solar and Wind Power Generating System We have designed this book as a guide for all the smart people out there who want to make the move but need a little help. We have covered everything you need to know about solar and wind power, the two most effective and efficient forms of renewable energy. The reader will learn thoroughly about the what's and how's of solar and wind power. You will be able to understand the entire working of both these systems. From the components to designing your own power generation system using the most plentiful resources on earth, the sun and the wind. How great is that? By the time you finish this book, you will be a pro in the matters of alternate energy. In the interest of user friendliness, we have included helpful imagery

In 1939, hatred took root in South Africa, where the seeds of apartheid were newly sown. There a boy called Peekay was born. He spoke the wrong language—English. He was nursed by a woman of the wrong color—black. His childhood was marked by humiliation and abandonment. Yet he vowed to survive—he would become welterweight champion of the world, he would dream heroic dreams. But his dreams were nothing compared to what awaited him. For he embarked on an epic journey, where he would learn the power of words, the power to transform lives, and the mystical power that would sustain him even when it appeared that villainy would rule the world: *The Power of One*.

The purpose of this book is to explain power generation using solar energy. Descriptions are made in the following order. Solar power (Chapter 1) Solar power generation
