Research in New Ionic Liquids  
Ionic liquids are a family of salts which by definition have very low melting points that are at or below the boiling point of water (< 100°C).1-4 They typically have very long liquidous ranges before they decompose, with essentially no vapor pressure in their liquid state and have found a special niche in the field of chemistry.

One use of ionic liquids is as a solvent in separation processes, organic molecules dissolved in the ionic liquid can be cleanly distilled off leaving the ionic liquid behind, this is a big area of research for ionic liquids. Having high thermal stability also means that devices which use ionic liquids can operate at a higher temperature.

Ionic liquids (ILs) are an important class of emerging compounds, owing to their widespread industrial applications in high-performance lubricants for food and cellulose processing, despite their toxicity to living organisms. It is believed that this toxicity is related to their actions on the cellular membrane. Hence, it is vital to understand the interaction of ILs with cell membranes.

Ionic Liquids provides endless opportunities for learning. Many students say this research project has helped them come to grips with chemistry they previously found daunting. Students begin by learning to synthesise an ionic liquid. Where the project goes next is entirely up to them.

Ionic liquids - The Institute for Research in Schools  
Thus, the current focus of research is on using ionic liquids as additives to lubricating oils, often with the motivation to replace widely used, ecologically harmful lubricant additives. However, the claimed ecological advantage of ionic liquids has been questioned repeatedly and is yet to be demonstrated from a lifecycle perspective.

Ionic liquid - Wikipedia  
Ionic liquids are a new class of purely ionic, salt-like materials that are liquid at unusually low temperatures. Currently, it's "official" definition uses the boiling point of water as a point of reference: "These are ionic compounds which are liquid below 100 °C.". More commonly, These have melting points below room temperature; some of them even have melting points below 0 °C.
