~~Review Of Corrosion Control Programs And Research~~

To be truly effective, a corrosion-control program must go beyond the industry current practice of periodic sampling and manual sample processing. To this end, the analyzer can provide continuous, accurate, repeatable data, including conditions during the critical 10% of operations when 90% of corrosion occurs.

~~Corrosion Control — an~~

~~overview | ScienceDirect
Topics~~

Corrosion control, scale control, and microbial control (or biofouling control) are the main performance parameters used to judge whether the application of a cooling water program is meeting the system needs.¹ In addition, compliance of applicable regulations and discharge limits are also the required performance parameters.

Implementing a CMP. A Corrosion Management Programme, sometimes also referred to as Corrosion Management System, is a vital element of Asset Integrity Management. A Corrosion Management Programme is the documented set of processes and procedures required for planning, executing, and continually improving the ability of an organization to manage the threat of corrosion for existing and future assets and asset systems.
