Chapter 6 - Sedimentary & Metamorphic Rocks - Study Guide ...

Rock made from eroded material broken off other rocks and cemented together is called sedimentary rock. One of the best examples of sedimentary rock is the layers that are seen in the Grand Canyon.

Rock Cycle: Igneous, Sedimentary, and Metamorphic Rocks ...

Igneous and sedimentary rocks mainly undergo this change and become metamorphic rocks. The

existing rock type which undergoes a change is referred to as the protolith. Hence, the study of metamorphic rocks provides an understanding of the pressure and temperatures deep within the earth's crust. Gneiss, marble, slate, schist, and quartzite are some of the different types of metamorphic rocks.

Sedimentary Rocks:  
StudyJams! Science |  
Scholastic.com

A rock is any naturally occurring solid mass or aggregate of minerals or mineraloid matter. It is categorized by the minerals included, its chemical composition and the way in which it is formed. Rocks are usually grouped into three main groups: igneous rocks, metamorphic rocks and sedimentary rocks. Rocks form the Earth's outer solid layer, the crust, and most of its interior, except for the ...

Rock (geology) - Wikipedia

Hi I'm Sedimentary. I was formed over the span of numerous years and years. Although my name wasn't always Sedimentary... My name used to be Metamorphic. I was formed under intense heat, but even though that is how I was created.. it was not how I wanted to live. I was tired of always being compressed by the other rocks on top.

## Metamorphic and Sedimentary Rocks

Metamorphic petrology involves the study of the composition and texture of metamorphic rocks. Such rocks include marble, gneiss, slate, and schist. Initially, sedimentary or igneous rocks undergo mineralogical, textural and chemical changes because of extreme pressure or temperature, and in some cases due to both.

What Is Petrology? - WorldAtlas

Slate and chalk are both sedimentary rocks. The sedimentary layers slowly sink into the crust. As the

# Get Free Sedimentary And Metamorphic Rocks Study

rock sink deeper, the pressure and temperature increase, and the rocks undergo metamorphoses. They are then called metamorphic rocks. Limestone, for example, is transformed into a colorful metamorphic rock, marble. The natural movements of Earth's crust can thrust sedimentary and metamorphic layers toward the surface or push them deeper into the mantle.
