Validation of the self-management ability scale (SMAS) and ...
The SMAS-S is a promising alternate instrument to evaluate self-management abilities. The psychometric properties of both the SMAS and SMAS-S are good. Validation of the self-management ability scale (SMAS) and development and validation of a shorter scale (SMAS-S) among older patients shortly after hospitalisation

Validation of the self-management ability scale (SMAS) and ...
Background: The 30-item Self-Management Ability Scale (SMAS) measures self-management abilities (SMA). Objectives of this study were to (1) validate the SMAS among older people shortly after hospitalisation and (2) shorten the SMAS while maintaining adequate validity and reliability.Methods: Our study was conducted among older individuals (? 65) who had recently been discharged from a hospital.

Validation of the self-management ability scale (SMAS) and ...
to measure Self-Management Ability (the SMAS-30) in aging individuals. SMA refers to the core behav-ioral and cognitive abilities which presumably contribute to sustainable well-being in later life. Robust ?ndings of the studies (n=275 and n=1338) showed that SMA could be measured reliably as a composite

How to measure self-management abilities in older people ...
The 30-item Self-Management Ability Scale (SMAS) was developed to measure SMA [19]. Losses in function-ing - something that is especially associated with hospita-lisation - lead to a decreased reserve capacity for coping with losses. Self-management abilities become particu-larly important. Our first objective was to validate the

Validation of the self-management ability scale (SMAS) and ...
Validation of the self-management ability scale (SMAS) and ... Published by Guset User , 2015-05-02 22:54:02 Description: Discussion Due to high risk of functional losses among older people after hospitalisation, SMA becomes particularly impor-tant.

Validation of the self-management ability scale (SMAS) and ...
Self-management abilities to maintain well-being were measured using the short (18-item) version of the Self-Management Ability Scale (SMAS-S), patients' perceptions of the productivity of interactions with health care professionals were assessed with the relational coordination instrument and the short (11-item) version of the Patient Assessment of Chronic Illness Care (PACIC-S) was used to assess patients' perceptions of the quality of chronic care delivery.

Chronically ill patients' self-management abilities to ...
Average self-management ability scores ranged from 1 to 5, with higher scores indicating higher self-management abilities. Social functioningwas measured using the social component of the Short Form 20 Health Survey (SF-20). This social functioning scale focuses on whether the respondent's health has limited social activities.

Understanding older patients' self-management abilities ...
Average self-management ability scores ranged from 1 to 6, with higher scores indicating better self-management abilities. The scale's internal consistency was 0.92. Cramm and colleagues showed that the psychometric properties of both the SMAS and SMAS Short version are good.

Self-management abilities and frailty are important for ...
The self-management of well-being (SMW) theory describes how older individuals can achieve well-being and is based on the notion that healthy aging is a lifelong process of realizing and sustaining well-being, even in the face of declining resources. For example, it includes the ability to look ahead and invest in resources (e.g., good health, good social relationships) that may contribute to health in the long term.

Self-management abilities and frailty are important for ...
The 30-item Self-Management Ability Scale (SMAS) measures self-management abilities (SMA). Objectives of this study were to (1) validate the SMAS among older people shortly after hospitalisation...

Altmetric - Validation of the self-management ability ...
Repeatedly self-assessing MSL and GS resulted in a slight improvement on these measures, which was mirrored by the improved mobility measured by TUG and SPPB, but did not result in improved self-management ability scores. Having a history of falling or experiencing a fall during follow-up did not influence these results.
