Why has Switzerland - a tiny, land-locked country with few natural advantages - become so successful for so long at so many things? In banking, pharmaceuticals, machinery, even textiles, Swiss companies rank alongside the biggest and most powerful global competitors. How did they get there? How do they continue to refresh themselves? Does the Swiss 'Sonderfall' (special case) provide lessons others can learn and benefit from? Can the Swiss continue to perform in a hyper-competitive global economy? Swiss Made offers answers to these and many other questions about the country as it describes the origins, structures and characteristics of the most important Swiss companies. The authors suggest success is due to a large degree to sound entrepreneurial thinking and an openness to new ideas. And they venture a surprising forecast on the country’s ability to keep pace in an age of globalisation.

Updated and Uncensored! As a private banker working for the largest bank in the world, UBS, Bradley Birkenfeld was an expert in Switzerland's shell-game of offshore companies and secret numbered accounts. He wined and dined ultrawealthy clients whose millions of dollars were hidden away from business partners, spouses, and tax authorities. As his client list grew, Birkenfeld lived a life of money, fast cars, and beautiful women, but when he discovered that UBS was planning to betray him, he blew the whistle to the US Government. The Department of Justice scorned Birkenfeld’s unprecedented whistle-blowing and attempted to silence him with a conspiracy charge. Yet Birkenfeld would not be intimidated. He took his secrets to the US Senate, the Securities and Exchange Commission, and the Internal Revenue Service, where he prevailed. His bombshell revelations helped the US Treasury recover over \$15 billion (and counting) in back taxes, fines, and penalties from American tax cheats. But Birkenfeld was shocked to discover that at the same time he was cooperating with the US Government, the Department of Justice was still doggedly pursuing him. He was arrested and served thirty months in federal prison. When he emerged, the Internal Revenue Service gave him a whistle-blower award for \$104 million, the largest such reward in history. A page-turning real-life thriller, Lucifer’s Banker Uncensored is a fascinating behind-the-scenes look at the secret Swiss high-net worth banking industry and a harrowing account of our government’s justice system. Readers will follow Birkenfeld and share his outrage with the incompetence and possible corruption at the Department of Justice, and they will cheer him on as he "hammers" one of the most well-known and powerful banks in the world.

Too Small to Fail analyzes how several successful 'small' countries, with populations under twenty million, have made a virtue out of their physical limitations. The book seeks to understand what it is they do differently, and why. What is their recipe for achieving better-educated, more egalitarian and wealthier populations? The book looks first at the forest and then the trees. It examines the characteristics shared by small countries, such as Switzerland, Ireland, Singapore, and the Scandinavian states. It draws parallels and discovers patterns shared among them that are common to each of their success stories. The book then looks at the policies of selected countries that have paved the way for remarkable improvements; and considers the individuals, corporations and institutions that have made a positive and sustainable impact. It further goes on to explain how these small countries are reshaping the World in a never before manner.

This book examines women's work in Switzerland as correlated with the country's socio-political and economic successes.

Two wealthy and powerful men engage in a decades-long contest to create and possess the most remarkable watch in history. James Ward Packard of Warren, Ohio, was an entrepreneur and a talented engineer of infinite curiosity, a self-made man who earned millions from his inventions, including the design and manufacture of America’s first luxury car—the elegant and storied Packard. Henry Graves, Jr., was the very essence of blue-blooded refinement in the early 1900s: son of a Wall Street financier, a central figure in New York high society, and a connoisseur of beautiful things—especially fine watches. Then, as now, expensive watches were the ultimate sign of luxury and wealth, but in the early twentieth century the limitless ambition, wealth, and creativity of these two men pushed the boundaries of mathematics, astronomy, craftsmanship, technology, and physics to create ever more ingenious timepieces. In any watch, features beyond the display of hours, minutes, and seconds are known as “complications.” Packard and Graves spurred acclaimed Swiss watchmaker Patek Philippe to create the Mona Lisa of timepieces—a fabled watch that incorporated twenty-four complications and took nearly eight years to design and build. For the period, it was the most complicated watch ever created. For years it disappeared, but then it surfaced at a Sotheby’s auction in 1999, touching off a heated bidding war, shattering all known records when it fetched \$11 million from an anonymous bidder. New York Times bestselling author Stacy Perman takes us from the clubby world of New York high society into the ateliers of the greatest Swiss watchmakers, and into the high-octane, often secretive subculture of modern-day watch collecting. With meticulous research, vivid historical details, and a wealth of dynamic personalities, A Grand Complication is the fascinating story of the thrilling duel between two of the most intriguing men of the early twentieth century. Above all, it is a sweeping chronicle of innovation, the desire for beauty, and the lengths people will go to possess it.

Tower of Basel is the first investigative history of the world's most secretive global financial institution. Based on extensive archival research in Switzerland, Britain, and the United States, and in-depth interviews with key decision-makers—including Paul Volcker, the former chairman of the US Federal Reserve; Sir Mervyn King, governor of the Bank of England; and former senior Bank for International Settlements managers and officials—Tower of Basel tells the inside story of the Bank for International Settlements (BIS): the central bankers' own bank. Created by the governors of the Bank of England and the Reichsbank in 1930, and protected by an international treaty, the BIS and its assets are legally beyond the reach of any government or jurisdiction. The bank is untouchable. Swiss authorities have no jurisdiction over the bank or its premises. The BIS has just 140 customers but made tax-free profits of 1.17 billion in 2011-2012. Since its creation, the bank has been at the heart of global events but has often gone unnoticed. Under Thomas McKittrick, the bank’s American president from 1940-1946, the BIS was open for business throughout the Second World War. The BIS accepted looted Nazi gold, conducted foreign exchange deals for the Reichsbank, and was used by both the Allies and the Axis powers as a secret contact point to keep the channels of international finance open. After 1945 the BIS—still behind the scenes—for decades provided the necessary technical and administrative support for the trans-European currency project, from the first attempts to harmonize exchange rates in the late 1940s to the launch of the Euro in 2002. It now stands at the center of efforts to build a new global financial and regulatory architecture, once again proving that it has the power to shape the financial rules of our world. Yet despite its pivotal role in the financial and political history of the last century and during the economic current crisis, the BIS has remained largely unknown—until now.

Despite only nine years of production, Vincents continue to be ridden regularly in rallies, hard in racing, and certainly well beyond the normal lifespan of a motorcycle. This book tells the Vincent story from 1946 until the present day, including the stories of those significant individuals who helped to make Vincents such legendary machines.
