The Ecology of Health (Schumacher Briefings): Amazon.co.uk ...

Robin Stott proposes solutions to the key problems that beset our present health system. He argues that if we are to develop a true public health service rather than a 'disease service', we must make radical changes to the decision-making processes. We need to acknowledge the health impact of many factors including the distribution of wealth, the size of communities, lifestyle issues, local ...

The Ecology Of Health Schumacher Briefings

The Ecology Of Health Schumacher Briefings Author: motta001.targettelecoms.co.uk-2020-09-29-21-42-39 Subject: The Ecology Of Health Schumacher Briefings Keywords: the,ecology,of,health,schumacher,briefings Created Date: 9/29/2020 9:42:39 PM

In this Briefing Robin Stott proposes solutions to the key problems that beset our present health system. He argues that if we are to develop a true public health service rather than a 'disease service', we must make radical changes to the decision-making processes.

In this Schumacher Briefing, Richard Douthwaite argues that just as different insects and animals have different effects on human society and the natural world, money has different effects according to its origins and purposes.

Intends to posit Schumacher's Middle Way thinking in the context of growing concerns about global warming and climatic changes and, teases out its implications for holistic accountability by introducing readers to the science of climate change and its implications for managing natural resources.

When this classic text was first published in 1992, it provided a unique focus for the burgeoning concern for sustainability and sustainable organizational practices. The book's impact continues to be felt today as large multinational corporations such as Wal-Mart and GE are making substantial commitments to the "triple bottom line" of economic success, social responsibility, and environmental protection, and sustainability has become a part of curricula in business schools around the globe. Featuring extensive new material throughout, this new edition of Management for a Small Planet is now widely available outside of North America for the first time. The book maintains the same unique vision and approach that made the original so influential. Unlike other texts on the topic, it employs a strategic, general management perspective within theoretical frameworks on how organizations can be instrumental in moving humankind toward a more sustainable world. Part I includes chapters dedicated to each dimension of sustainability: biophysical, economic, and social. Part II contains the specifics on the formulation and implementation of sustainable management practices, all grounded in the principles of organizational behavior, leadership, and business strategy. The book is an ideal text for any course concerned with environmental management and sustainable management practices.

Education as if people and planet mattered In Transformative Learning , Satish Kumar reflects on the legacy of Schumacher College, a beacon of innovation that fosters an ecological-based, holistic model of higher education built around the college's unique "learn by doing," head, heart, and hands pedagogy. Over fifty current and former instructors and alumni, including Vandana Shiva, David Orr, Kate Raworth, Fritjof Capra, Bill McKibben, Mary Evelyn Tucker, and Jonathon Porritt, paint a rich picture of education for human well-being and the ecological health of the planet. Contributions delve deeply into the nature of transformational learning and holistic education, present a wealth of alumni experiences of working towards an ecological society, and detail the expansion of the Schumacher model to Belgium, Brazil, India, Japan, and beyond. The result is a rich tapestry of ideas and educational methods packed with insights and experience for practitioners and activists looking to build a just, ecological society.

Does God still speak to his people today, through prophetic words, pictures and dreams? Does he still inspire his followers to take certain actions, as he did in Biblical times? The author certainly believes so and, in this book, describes two prophecies given by different women about the city of Birmingham. The first prophecy told of "new beginnings" and gave the name for three God-inspired projects that would be set up in the city: Gilgal, Jericho and Bethel. This book tells the story of how they came to be set up and resourced, through a series of miraculous interventions, and of how they are now helping the most disadvantaged people in the city. It should encourage and inspire anybody with an interest in urban mission and those who believe that God is leading them in new directions.

The advances of modern biomedicine have provided a sophisticated but somewhat mechanistic approach to health. It is a good approach to emergencies, but has fallen down in the maintaining and creating health. Dazzled by the progress of science, we have lost touch with the simple remedies and body wisdom that were once a part of every household. This Briefing suggests that Complementary and Alternative Medicine (CAM) has a central part to play in the future of health care.

Schumacher Briefing No 9 Our industrial activities have dangerously destabilized the Gaian system, and if humanity is to avoid disaster, we need to make changes now. In this new Briefing Roy Madron and John Jopling argue that we have no chance of achieving the necessary changes while our democracies exist to serve the "Global Monetocracy," which is engaged in the relentless pursuit of economic growth in order to sustain a global debt-money system for the benefit of the wealthy and powerful. Gaian Democracies shows how to create a global network of just and sustainable societies that could co-exist symbiotically with Gaia. The authors stress the systems framework on which they have based their proposals and draw on real-world examples such as the Mondragon Cooperatives of Basque Spain, Visa International, the Semco Corporation, and the hundreds of participative budgets initiated by Brazilian Workers' Party.

The principle of 'contraction and convergence' can be applied to climate change, showing us a way forward by reducing the ecological footprint of some while increasing that of others. Such convergence has many dimensions: technological change, cultural diversity, human rights and political power. This Briefing explores these ideas and describes how a charity put these ideas into action. Inspired by the work of Social Change and Development (SCAD) in India, the charity has directly reduced carbon emissions by erecting wind turbines in India, funded by individuals and businesses with high emissions elsewhere in the world in return for an allocation of the carbon saved. The Converging World is an action story which tackles the complexities of climate change, environmental degradation and social injustice.

This scientifically rigorous and philosophically sophisticated defense of environmentalism against economics-based criticism and technological optimism is meant to excite, educate, and alarm the reader.
