One of the common frustrations for students trying to make sense of the various debates and concepts that inform contemporary educational and social science research methods such as structuralism, postpositivism, hermeneutics, and postmodernism is that most books introducing these topics are written at a level that assumes the reader comes to this material with a basic grasp of the underlying ideas. Too often, fundamental concepts and theories are presented without adequate preparation and without providing practical examples to illustrate key elements. When the first edition of "Conceptual Foundations of Social Research Methods" was published, it represented a sharp contrast with these other approaches and received much praise. In this revised and expanded second edition, David Baronov further develops his critically acclaimed treatment of the core conceptual tools of social research informing education and the social sciences, updating his discussion of the current literature, and adding a new chapter that explores the role of pragmatism. Features of the Second Edition"

Designed for introductory research courses in the professional fields and social sciences, this text acquaints students and beginning researchers with a broad view of research methodologies and an understanding of the assumptions that inform each of these approaches. More experienced researchers will also find the book useful in acquainting them with methodologies and theoretical frameworks that are new to them. The text is distinguished by its avoidance of using the discreet categories of qualitative and quantitative methods to organize the chapters. While some chapter authors rely more on one or the other, many employ multiple methodologies to investigate particular problems and questions. Further, the book is not organized into single, contradictory positivist-interpretivist categories of research; chapter authors often situate methodologies within a variety of, and sometimes multiple, theoretical positions, particularly as these approaches are shaped by the historical context of social science research. Focus points in Foundations for Research: Methods of Inquiry in Education and the Social Sciences: *research ethics. *intertwined relationship of theory and research design. *systematic examination of ways to design and implement high-quality, trustworthy research across varying research designs. *specific methods for implementing research within various frameworks. *pedagogical strategies.
