By Nick DeMartino. Each one of us generates vast amounts of data—email, phone calls, social networking, photos, text messages, videos, browsing, purchasing, and more. Our data create a new form of identity, what you might call a " Virtual Self " —a concept that will determine the future of the Web. This virtual identity, and all of the bits of data that comprise it, has become an incredibly valuable form of currency—it ' s the way the value is exchanged online.

We believe that having a virtual self-representation dissimilar to the real self in a social situation might decrease anxiety, because (a) virtual embodiment through an avatar can significantly alter a person ' s body schema and social role (Biocca, 1997; Kilteni et al., 2012), and (b) a dissimilar virtual self provides anonymity, which reduces inhibition and anxiety and facilitates self-expression. Embodying a dissimilar self could thereby neutralize some of the factors that contribute to ...

"The host of CBC Radio's Spark explores the very real impact of the virtual information we generate about ourselves -- on our own lives, our communities, and our government. We generate enormous amounts of online data about our habits: where we go, what we do, and how we feel. Some of that is stuff we choose to report; some of it is the offhand data trails we leave behind. The Virtual Self looks at the debates and challenges around virtual data-sharing -- from Facebook status updates to Google Navigator -- and its potential for building more responsive communities and governments. Nora argues that if we wrestle now with issues like privacy and data control, we can harness the power of that data. The host of CBC Radio's Spark, Nora Young has fascinating information at her disposal, unique insights into the intersection of the virtual and real worlds, and a wonderful voice for making all of these clear to a general audience. Accessible and entertaining, The Virtual Self takes that personal, psychological reality of everything from email to status updates and teases out the increasingly bigger impacts on the real world around us of the virtual information we all generate." -- Publisher's website.

The Virtual Self is an engaging and exciting text that addresses issues relating to our rapidly changing society, social structure, and communication needs. In doing so, it addresses major issues in sociology that inform virtually all of a student ' s course work. Introduces students to concepts of the self and society in an age of rapid technology and high speed communication Examines the relationship between everyday life and social structure in key domains of communication, personality, work/family, leisure and entertainment, and economics Written in a lively, engaging style for readers without a sociological background

"This book provides insights to better enhance the understanding of technology's widespread intertwinement with human identity within an advancing technological society"--Provided by publisher.

We ' ve always dreamed of perfect places: Eden, heaven, Utopia. Imagine gambling without loss, love without heartbreak, sex without exposure, experience without risk. Welcome to the fascinating world of online virtual reality, the land of invented places and populations that is entered and inhabited every week by nearly fifty million people worldwide. Each participant creates a virtual body, works at virtual jobs, and makes virtual friends and family. In Second Lives, Tim Guest, an internationally acclaimed young journalist, takes us on a revelatory journey through the electronic looking glass as he investigates one of the most bizarre phenomena of the twenty-first century. From Second Life to EverQuest and beyond, here are the computer-generated environments and characters that can easily become more engrossing and fulfilling than earthly existence. With the click of a mouse you can select eye color, face shape, height -- you can even give yourself wings. Your character, or avatar, can build houses, make and sell works of art, earn money, get married and divorced. In this fascinating and groundbreaking book, Guest meets people who found meaningful love and friendship despite never having met in person, catches up with the companies that have used virtual worlds to make big money, investigates the U.S. military ' s massive online global model that trains soldiers to fight anyone anywhere, and travels all the way to gaming-crazed Korea to get a taste for just how big this phenomenon really is. At first glance, these new computer-generated places seem free from trouble and sorrow. But Guest examines the dark side of this technology too, including the online criminals who plague imaginary worlds, from cyber mafiosos and prostitutes to real hackers and terrorists. It seems that one cannot escape greed, corruption, and human weakness -- even inside a computer screen. Are these virtual worlds a way to enhance life or to escape it? Guest explores this question personally as he lets himself be transported into myriad parallel universes. By turns provocative, inspiring, and disturbing, Second Lives is a crucial book for this millennium. After all, real life is so twentieth century. Advance praise for Second Lives " Tim Guest is a young writer with the literary goods. My Life in Orange, his hit memoir of growing up in a commune, looked at his past; his riveting new book, Second Lives, looks at our future: the world of virtual reality and the spellbound people who inhabit it. The book is some kind of revelation -- by turns compelling, chilling, and illuminating. Curious, intelligent, offbeat, and artful, Guest is at the beginning of a big career. " —John Lahr, senior drama critic, The New Yorker, author of Prick Up Your Ears: The Biography of Joe Orton Praise from England for Second Lives " An anthropological adventure but also Guest ' s personal voyage . . . a fascinating portrait of rainbow landscapes and their inhabitants. " -- Time Out London " Rich and colourful . . . an important mapping of a new social frontier. " -- The Guardian " Remarkably timely. " -- The Sunday Telegraph " Astonishing. " -- The Sunday Times

Predicting the future is a risky game, and can often leave egg on one ' s face. However when the organizers of the Intelligent Virtual Environments workshop at the European Conference on AI predicted that the field of Intelligent Virtual Agents would grow and mature rapidly, they were not wrong. From this small workshop spawned the successful one on Intelligent Virtual Agents, held in Manchester in 1999. This volume comprises the proceedings of the much larger third workshop held in Madrid, September 10 11, 2001, which successfully achieved the aim of taking a more international focus, bringing together researchers from all over the world. We received 35 submissions from 18 different countries in America, Asia, and Africa. The 16 papers presented at the conference and published here show the high quality of the work that is currently being done in this field. In addition, five contributions were selected as short papers, which were presented as posters at the workshop. This proceedings volume also includes the two prestigious papers presented at the workshop by our keynote speakers: Daniel Thalmann, Professor at the Swiss Federal Institute of Technology (EPFL) in Lausanne and Director of the Computer Graphics Lab, who talked about The Foundations to Build a Virtual Human Society. Jeff Ricket, Project Leader at the Information Sciences Institute and a Research Assistant Professor in the Department of Computer Science at the University of Southern California, who debated about Intelligent Virtual Agents for Education and Training: Opportunities and Challenges.

The author provides a study of rape in a virtual world and delves more deeply into the ramifications of crime in a place where race, gender, and identity can be changed at will

It has been my experience and observation of students of Buddhism, that after an initial period of enthusiastic practice, they get stuck. They come to the edge of a gap, and can't go back but are stuck going forward. The edge of this gap represents the boundary that defines the results of their efforts so far. Serious effort has been given to practice and to incorporating the fundamentals of the Buddha's method into their lives. Nevertheless, the practitioner I have in mind feels not only stuck but somewhat disheartened perhaps. Having exhausted the youthful enthusiasm that naturally arises upon discovery of the Buddha's path, one now feels a lack of joy. Looking beyond the boundary line of the gap, there seems to be a vast space between where one is now and the ultimate goal of enlightenment. The Virtual Self: Beyond the Gap in Buddhist Philosophy offers some suggestions for renewing one's inspiration and a way to joyfully navigate that sacred space beyond the gap.

If you can Master the Virtual Sale, your production will be even greater than in a face-to-face environment.

The text analyses identities within virtual on-screen environments. Investigating regions in Second Life, it explores topical issues of the body in virtual space, nature and mythology in virtual environments, and the key arguments surrounding normative and subversive representations of gender, sexuality and subversion in screen-based environments.

Get remote team members to interact as if they ' re in the same room! Whether you ' re videoconferencing with team members across the world or e-mailing a colleague sitting ten feet away, the truth is evident: technology has permanently altered the way we communicate. The virtual workplace can facilitate quicker decision making and reduced overhead. But the lack of face-to-face interaction can also impede trust, innovation, and creativity among team members.
