This tutorial shows how to use Maple both as a calculator with instant access to hundreds of high-level math routines and as a programming language for more demanding tasks. It covers topics such as the basic data types and statements in the Maple language. It explains the differences between numeric computation and symbolic computation and illustrates how both are used in Maple. Extensive "how-to" examples are used throughout the tutorial to show how common types of calculations can be expressed easily in Maple. The manual also uses many graphics examples to illustrate the way in which 2D and 3D graphics can aid in understanding the behavior of functions.

The book is largely about basic knowledge/skills/techniques related to the leather crafts. I will explain it with production process of some works that would be helpful when you get started. Once you have gained some basic skills, you can make works with more advanced patters and techniques. Once you completed the basic and intensive course, you can become somewhat familiar with the production method. Based on this, we can create some unusual patterns and prototypes.
